AzonWebStore DataSync Structure

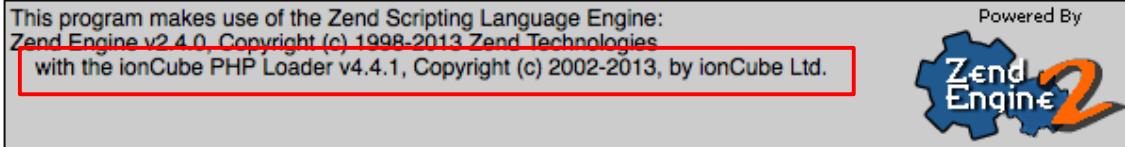

AzonWebStore data sync structure has been predefine to support additional plugin module. You do not need to make any changes to our folder structure. You can install **Opencart Amazon Plugin** as module. These are our internal structure.

How To Install Ioncube On VPS / Dedicated Server

Pr-requisite

In order to used AzonWebStore Data Sync Suites, you need to install ioncube.

Supported PHP Version 5.3.x / 5.4.x / 5.5.x and 5.6.x.

ionCube Loader Wizard

Please note that the following problem currently exists with the ionCube Loader installation:

- The necessary zend_extension line could not be found in the configuration.

To use files that have been protected by the [ionCube PHP Encoder](#), a component called the ionCube Loader must be installed.

For a **local** server you should install the ionCube Loader using the [php.ini](#) configuration file. ([Please click here if you are not on a local server.](#))

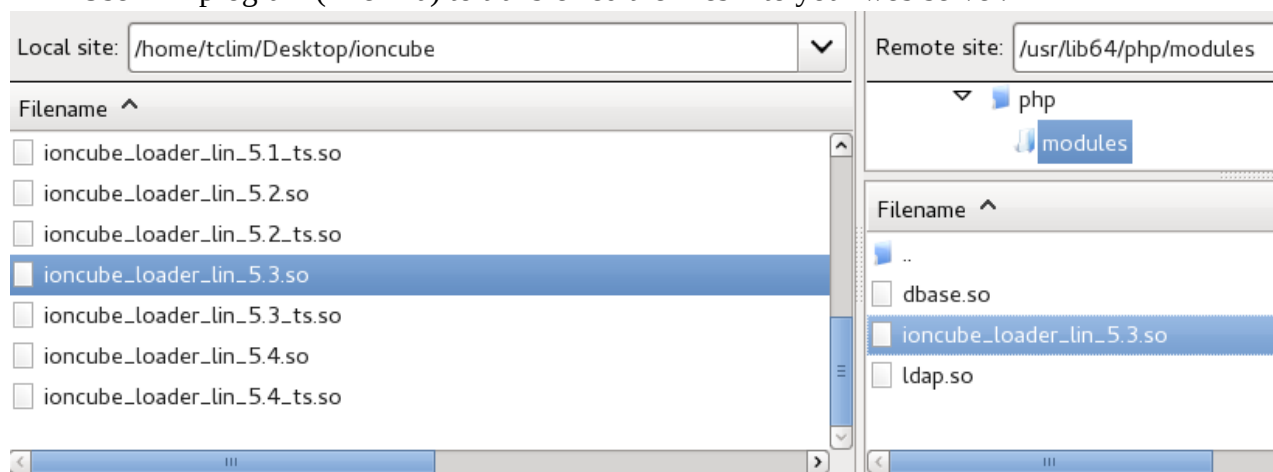

Installation Instructions

1. Download one of the following archives of Loaders for Linux x86-64:
 - o [tar.gz](#)
 - o [tar.bz2](#)
 - o [MS Windows installer](#)

Please note that the MS Windows installer version is suitable for uploading from a Windows PC to your Linux server.
2. Put the Loader files in `/usr/lib64/php/modules`
3. [Save this 20ioncube.ini](#) file and put it in your ini files directory, `/etc/php.d`
4. Restart the Apache server software.
5. When the server software has restarted, [click here to test the Loader.](#)
6. If the Loader installation failed, check the Apache error log file for errors and see our guide to [Unix related errors.](#)

Please follow the step below to install ioncube.

1. Choose your ioncube loader and download to your desktop.
2. Extract **ioncube_loaders_lin_x86-64.tar.gz**
Use FTP program (Filezilla) to transferred the files into your web server.

3. Right click and save the file **ioncube.ini** and put it to **/etc/php.d**

You can manually create the ioncube.ini

```
cd /etc/php.d
```

```
vi ioncube.ini
```

```
[Zend]
zend_extension = /usr/lib64/php/modules/ioncube_loader_lin_5.3.so
```

4. Restart the apache server

```
service httpd restart
```

5. Click on the link to test again. If you see the message below. Your are done.
6. For security reason, please remove the folder **install/** from your server.

ionCube Loader Wizard

Loader Installed

The ionCube Loader version 4.4.1 for PHP 5.3 is already installed and encoded files should run without problems.

Please contact the script provider if you do experience any problems running encoded files.

For security reasons we advise that you remove this Wizard script from your server now that the ionCube Loader is installed.
Please delete this folder **install/** from your server now.
